

TSM CONSULTZ

Healthcare Denial & Appeal Packet

Synthetic RCM case designed for denial analysis and recovery demonstration

SYNTHETIC DEMONSTRATION PACKET

Designed to demonstrate TSM Neural Core document intelligence, case creation, prioritization, explainability, decision support, delivery packaging, HITL governance, mission tracking, and executive rollup.

01 — Claim Summary

Field	Synthetic Value
Claim ID	CLM-2026-018742
Member	SYNTHETIC PATIENT 1047
Date of Service	07/14/2026
Payer	Desert Horizon Health Plan
Provider	TSM Demo Medical Group
CPT	27447
Billed Amount	\$24,680
Expected Reimbursement	\$18,742

Operational note: claim was submitted after a prior-authorization workflow had already been initiated. The denial packet contains multiple references to authorization status.

02 — Payer Denial

Denial reason: Prior authorization not obtained.

Denial code: PA-17

Payer message: Authorization documentation was not present in the claim record at adjudication.

Appeal window: 45 calendar days from denial date.

03 — Authorization Record

Field	Value
Authorization Number	AUTH-88421
Requested Service	CPT 27447
Effective Date	07/10/2026
Expiration Date	08/09/2026
Status	Approved
Approved Units	1

Authorization was approved before the date of service. The authorization record is present in the internal packet but was not referenced in the payer denial.

04 — Provider Documentation

Clinical summary: Documentation supports medical necessity for the procedure and identifies the same member, provider, service code, and date of service as the claim.

Submission note: Authorization number AUTH-88421 appears in the provider's scheduling record.

05 — Payer Policy Excerpt

For services requiring prior authorization, the plan may deny a claim when authorization cannot be matched to the adjudicated service record. Reconsideration may be requested when valid authorization evidence can be supplied.

DEMO TRIGGER: The packet intentionally contains a valid authorization record that is not reflected in the denial rationale.

TSM Expected Output — Executive View

TSM Field	Expected Finding
Priority	HIGH
Exposure	\$18,742
Root Cause	Authorization-to-claim record mismatch
Confidence	91%
Recommended Action	Submit reconsideration with AUTH-88421 and supporting provider documentation.
Human Decision	Required before submission
Evidence	Claim, denial, authorization, provider documentation, payer policy

Wow-factor: TSM should connect evidence across the packet, identify that the denial rationale conflicts with available authorization evidence, and convert the finding into a governed appeal workflow.
